GEMINI[®] TWIN is an anatomic backrest which together with anti-decubitus seating cushions of GEMINI[®] SPIN belong to a uniform product concept focusing on the issues related to sitting on wheelchairs united under the term of GEMINI[®] SEATING TECHNOLOGY by the Czech manufacturer of KURY.

GEMINI[®] TWIN Backrests are anatomically shaped solid backrests designed to be installed onto most types of wheelchairs. Primarily, the main supporting back part is equipped with a lumbar support which helps ergonomic position of lumbar and pelvic area of the spine as it fills the area between the main rest and the seating cushion (the seat). The lumbar support can be adjusted separately.

GEMINI[®] TWIN Backrests are available in 3 different heights (see the table) and various widths ensuring the proportional contours.

GEMINI TWIN

Be Seen Line

First ever backrest for wheelchairs with active safety element.

The backrest of GEMINI TWIN *Be Seen Line* contains an active light band of SCILIF SubFibre sewed in along the circumference of the backrest. The control unit with controlling elements (recharging Li-Ion accumulator included) is placed in the pocket on the upper edge of the backrest. Light-conducting fibres emit strong light of extreme visibility in darkness. It is possible to regulate the brightness in 3 levels, including the function of flashing. The lace edgings with the light fibre of SCILIF SunFibre are highly flexible, mechanically resistant, and washable with the cover.
